WhatsApp-Style Frontend — PRD & Antigravity Prompt

Purpose: Create only the frontend UI for a WhatsApp-inspired chat web application. The provided WhatsApp screenshot is the visual reference.

1. Project Scope

Build a polished, responsive frontend only. Use mock/static data and frontend state. No backend, database, API, authentication, Supabase, or Render.

2. Core Frontend Features

• Chats: chat list, search, individual chat screen, message bubbles, message input, send-message interaction using mock state.

• Groups: create group UI, group chat, add users, remove users, change group admin.

• Channels: channel list, channel view, mock channel posts.

• Status: status list and status viewing UI.

• Calls: calls list and incoming/outgoing call UI.

• Profile: profile information, profile-picture placeholder, edit-profile UI.

3. Design Requirements

• Use the supplied screenshot as the main visual reference.

• Recreate its overall layout, structure, spacing, typography, colors, navigation, chat list, icons, and visual style.

• Use Lato as the main font.

• Responsive on desktop and mobile.

• Use reusable, component-based frontend code.

• Use realistic mock names, messages, groups, and channels.

• Do not copy or expose real personal information from the screenshot.

4. Technical Requirements

• Frontend only.

• No backend.

• No database.

• No Supabase.

• No Render.

• No APIs.

• No authentication.

• Do not add unnecessary libraries.

• Inspect and reuse the existing project setup before making major changes.

• The final project must run locally.

5. Final Antigravity Prompt

```
Create ONLY the FRONTEND UI of a WhatsApp-inspired chat web application.

I am providing a WhatsApp screenshot as the visual reference. Recreate the overall layout, structure, spacing,

IMPORTANT:
- Frontend only.
- Do NOT create a backend.
- Do NOT create a database.
- Do NOT use Supabase.
- Do NOT use Render.
- Do NOT create APIs.
- Do NOT add authentication.
- Use mock/static data only.
- Do not use real personal information from the screenshot.

FRONTEND FEATURES:
1. Chats: chat list, search, individual chat screen, message bubbles, message input, and send-message interacti
2. Groups: create group UI, group chat UI, add users UI, remove users UI, and change group admin UI.
3. Channels: channel list, channel view, and mock channel posts.
4. Status: status list and status viewing UI.
5. Calls: calls list and incoming/outgoing call UI.
6. User profile: profile information, profile-picture placeholder, and edit profile UI.

DESIGN REQUIREMENTS:
- Use the provided screenshot as the main visual reference.
- Keep the design clean and modern.
- Use Lato as the main font.
- Make it responsive for desktop and mobile.
- Use reusable components.
- Keep the code organized and easy to understand.
- Use realistic mock names, messages, groups, and channels.
- Make navigation and buttons work using frontend state/mock data only.
- Do not copy or expose any real personal information from the screenshot.

TECHNICAL REQUIREMENT:
Build a complete working frontend that can run locally.
Before making major changes to the existing project, inspect the existing project structure and reuse the exist
Do not add unnecessary libraries or technologies.

The final result should look like a polished WhatsApp-style frontend application based on the provided screensh
```

How to use: Keep the screenshot in Figma for reference. If Antigravity provides an image/file attachment option, attach the WhatsApp screenshot there and paste the prompt above. Do not attach the whole Figma project unless specifically required.
